USES for the GOPRO Hero VIDEO/STILL CAMERA

**News flash: GoPro
Hero goes HD!
Coming this fall**

You can shoot up to 56 minutes of video continuously (1.8gb file). A 2Gb card can hold 1940+ still pictures.

You should buy this camera for:

- Cars, Boats, Planes, Trains, Motorcycles, JetSkis, Quadrunners....
- Surfboard, Skateboard, Boogie Boards...
- Hot Air Balloons, Rafting, Canoeing
- On a helmet for all the above
- R/C cars: boats/planes/trains/helium balloons
- pools, fountains, waterfalls, aquariums
- Boy Scouts, Hikers, Campers
- Table loaners at a well-lit wedding reception
- vacation underwater or out of the water
- Public speaking, presentations
- Interior Designers, Architects, Real Estate agents
- Training videos where space is tight such as auto repair
- A hidden camera. This thing will hide in the palm of your hand!
- Events/Functions. Have a bunch of these throughout an event. Then plug directly into a big screen and watch for immediate playback, from the camera!
- A **time lapse camera** (every 2 seconds or 5 seconds for up to 2 hrs). Good for R/C
- A dog harness
- The end of a guitar, on a drum kit, on a singer's mic
- Building inspector or plumber
- A camera for your kids

And on....and on....and on.....

You should you NOT buy this camera if you need:

- Precise, high-quality audio or need stereo **
- A flash or a zoom or AC power
- DVD resolution. Camera is **512 x 384**(tv resolution), stills are **2592x1944** **HD coming in fall**
- Part of a scene in focus, part out of focus. This camera is always in focus
- Precise control over aperture or shutter speed. This camera is fully-automatic +
- Longer than 56 minutes of continuous video
- If you have a low-light/evening situation
- A webcam. This camera does not shoot live video
- As you're only personal digital camera

** a really good workaround is to buy a handheld digital recorder (Dictaphone) type recorder that can attach to the back of the GoPro camera and records near CD quality sound. See Eye Of Mine complete package.

+ In bright light, you can use a neutral density gel filter to bring down the light, making the video appear smoother.

Specifications for both GoPro Hero cameras:

Resolution: 5 megapixel (2592x1944) photo, 512x384 video

Sensor: CMOS

Video Format: MJPEG, 30 fps, saved as .AVI file
